Home
Observability
APM
APM automatically collects in-depth performance metrics and errors from inside your applications.
Add APM
Logs
Ingest logs from popular data sources and easily visualize in preconfigured dashboards.
Add log data
Metrics
Collect metrics from the operating system and services running on your servers.
Add metric data
Security
SIEM
Centralize security events for interactive investigation in ready-to-go visualizations.
Add events
Add sample data
Load a data set and a Kibana dashboard
Upload data from log file
Import a CSV, NDJSON, or log file
Use Elasticsearch data
Connect to your Elasticsearch index
Visualize and Explore Data
APM
Automatically collect in-depth performance metrics and errors from inside your applications.
Canvas
Showcase your data in a pixel-perfect way.
Dashboard
Display and share a collection of visualizations and saved searches.
Discover
Interactively explore your data by querying and filtering raw documents.
Graph
Logs
Manage and Administer the Elastic Stack
Console
Skip cURL and use this JSON interface to work with your data directly.
Index Patterns
Manage the index patterns that help retrieve your data from Elasticsearch.
Monitoring
Track the real-time health and performance of your Elastic Stack.
Rollups
Summarize and store historical data in a smaller index for future analysis.
